## HELICOIL ${ }^{\circledR}$ Kits Twinsert

## M 3-M 12|1 dimension | Type Screwlock

HELICOIL ${ }^{\circledR}$ Plus Twinsert repair kit to correct and repair extensively stripped or too large tapped holes.

## Properties:

- Outer HELICOIL ${ }^{\circledR}$ Plus of Free Running type, inner HELICOIL ${ }^{\circledR}$ Plus of Screwlock type

## Contains:

- A number of HELICOIL ${ }^{\circledR}$ Plus pairs (consisting of one outer and one inner insert each)

- 1 twist drill for tap drilling for the outer HELICOIL ${ }^{\circledR}$ Plus insert (up to M8)
- 1 HELICOIL ${ }^{\circledR}$ tap for the outer insert
- 1 installation mandrel each for the inner and outer HELICOIL ${ }^{\circledR}$ Plus insert
- 1 tang break-off tool (not from M12)
- Practical case for storage and transport
- Operating instructions

## Note:

- 20 HELICOIL ${ }^{\circledR}$ Plus pairs up to M6
- 10 HELICOIL ${ }^{\circledR}$ Plus pairs from M8
- From M12, the tang is removed in a practical way using snipe nose pliers.

Since the inner HELICOIL ${ }^{\circledR}$ Plus is the standard length, the HELICOIL ${ }^{\circledR}$ Plus Twinsert is one thread longer which must be taken into consideration for the length of the holding thread. If that thread length is not available, both HELICOIL ${ }^{\circledR}$ Plus inserts must be shortened accordingly.

Technical information can be found on the last page.

| Diameter | Article number | DHC | $\mathrm{D}_{1} \mathrm{HC}$ |  | Nominal length | Nominal length |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| (d) |  | nominal size | min. | max. | $\mathrm{t}_{2}(\mathrm{x} \mathrm{d})$ | $\mathrm{t}_{2}$ |
| M 3 | 41859030946 | 4.31 | 3.76 | 3.87 | 1.5 | 5.00 |
| M 4 | 41859040946 | 5.83 | 5.06 | 5.20 | 1.5 | 6.70 |
|  | 41859040947 |  |  |  | 2.0 | 8.70 |
| M 5 | 41859050946 | 7.08 | 6.21 | 6.37 | 1.5 | 8.30 |
|  | 41859050947 |  |  |  | 2.0 | 10.80 |
| M 6 | 41859060946 | 8.59 | 7.52 | 7.71 | 1.5 | 10.00 |
| M 8 | 41859080946 | 11.23 | 9.90 | 10.11 | 1.5 | 13.25 |
| M 10 | 41859100946 | 13.86 | 12.27 | 12.51 | 1.5 | 16.50 |
| M 12 | 41859120946 | 16.49 | 14.65 | 14.92 | 1.5 | 19.75 |

## HELICOIL Plus thread inserts

W and $\mathrm{d}_{1}$ are the control values for thread inserts (Free Running and Screwlock) before they have been installed. The length can only be measured for installed thread inserts.

## Holding thread

Assembly

Prior to tapping, counter-bore $90^{\circ}$ and deburr Outside diameter of countersink = $\mathrm{D}_{\mathrm{Hc}} \mathbf{+} \mathbf{0 . 1} \mathbf{~ m m}$.
d $=$ Nominal thread diameter
P = Thread pitch
$d_{1}=$ Outside diameter of thread insert prior to installation
W = Number of threads prior to installation
$D_{\text {нс }}=$ Outside diameter of the parent thread
$\mathrm{D}_{\text {1HC }}=$ Crest diameter
B = Suitable twist drill diameter. Please note:
$\mathrm{D}_{1 \text { нc }}$ is critical for selecting the correct twist drill diameter.

When you use HELICOIL@ Plus thread inserts for volume production, we recommend to add at least $1 \times \mathrm{P}$ to values $\mathrm{t}_{1}$ and $\mathrm{t}_{2}$.
$\mathrm{t}_{1}=$ Minimum depth of tapped hole according to DIN 76 - Part 1 (guide value)
$\mathrm{t}_{2}=$ The nominal length of the thread insert corresponds to the minimum length of the full parent thread for blind holes or the minimum plate thickness for a through hole.
$\mathrm{t}_{3}=$ Maximum screw-in depth when the tang is not removed
$\mathrm{t}_{5}$ = Distance of the thread insert from the joint face $=$ 0.25 to 0.5 P , if $\mathrm{t}_{2}$ corresponds to the abovementioned minimum value
